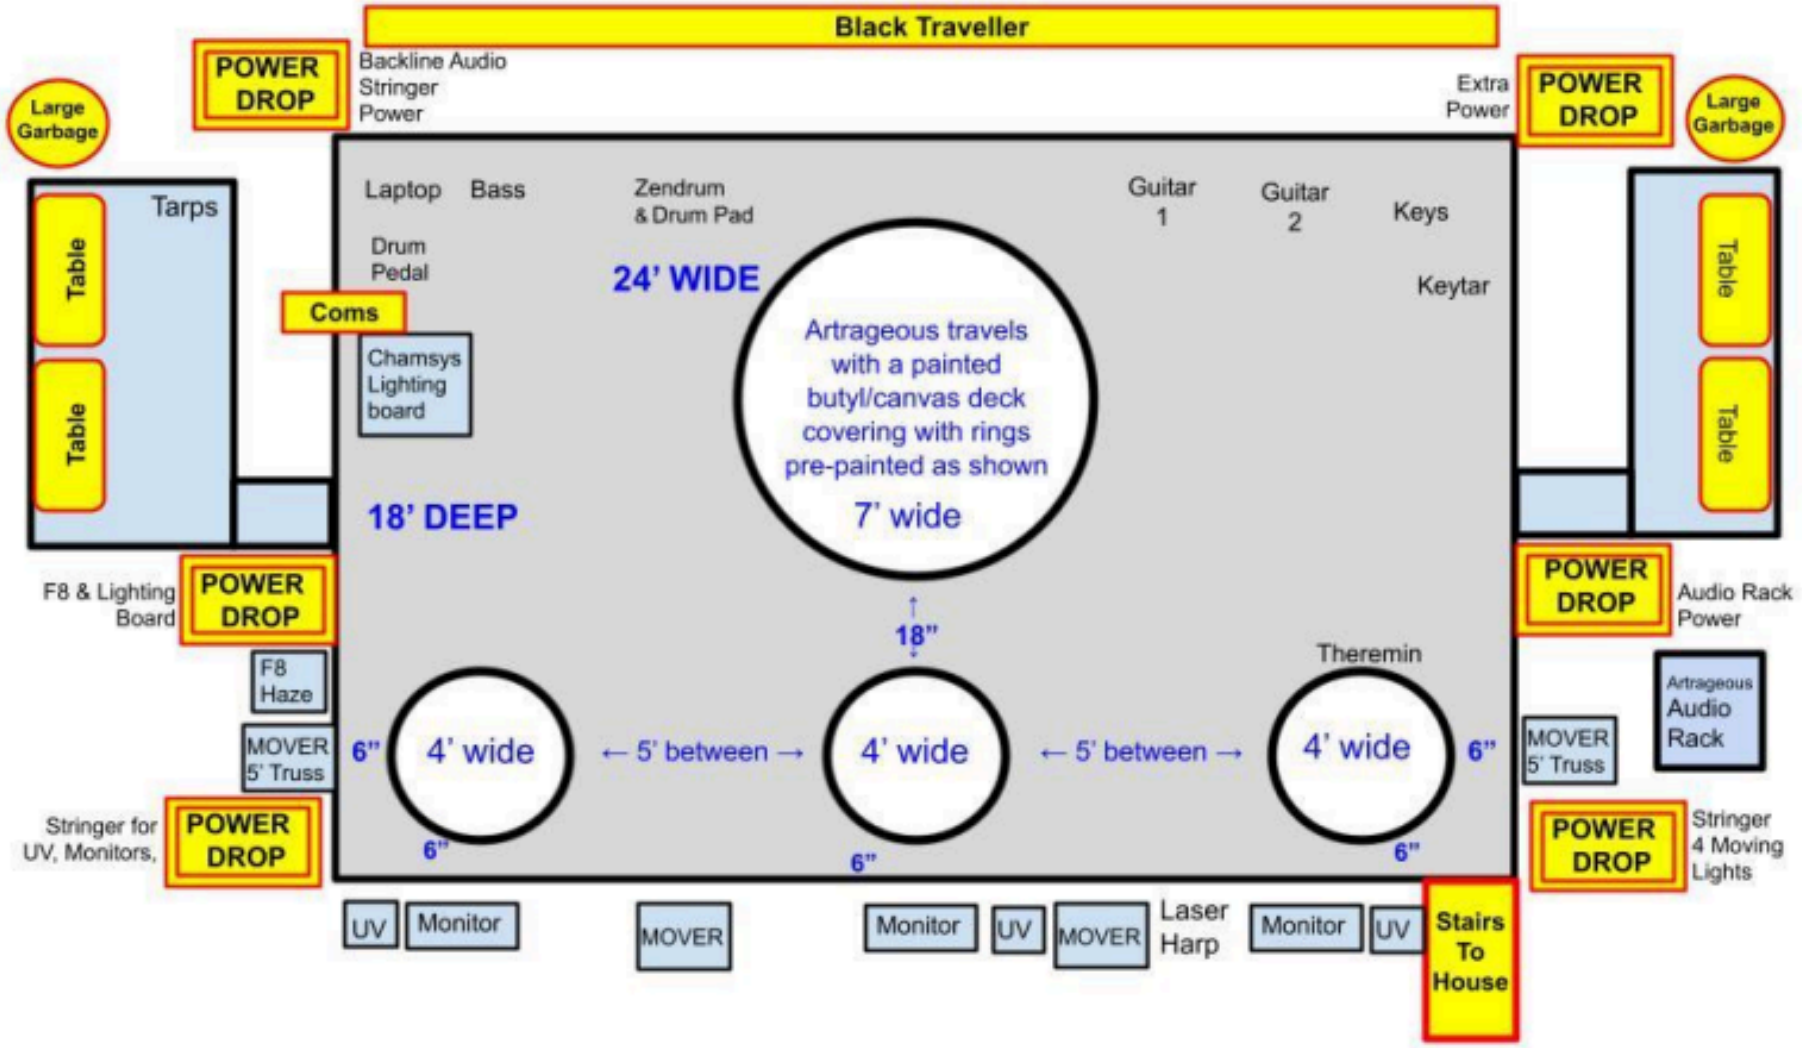
# Stage Diagram 'C'

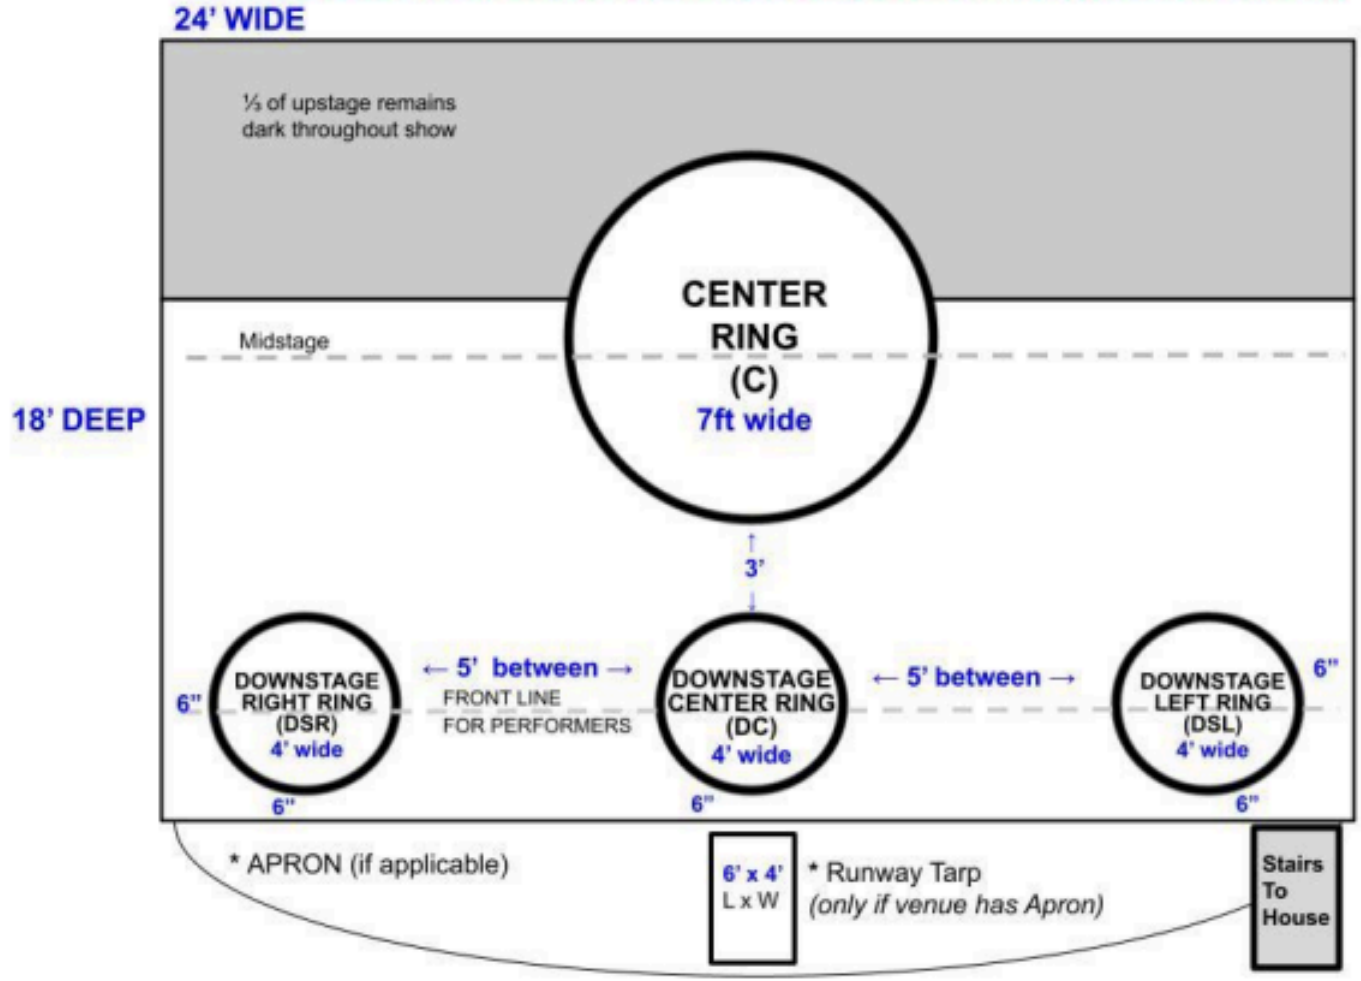
*All items in Yellow provided by house *prior to set up* in these locations

*All items in Blue provided by Artrageous & run from stage



# LIGHTING FOCUS (C)

Artrageous travels with a 24'x18' custom deck with 4 performance rings as shown.
We ask that FOH lighting be roughly focused on these rings prior to our arrival based on this diagram.
All focusing of venue lighting is done to the Front Lights.
We ask for overhead electrics during our standard Artrageous production, but they do not require focusing.



Also add **upstage wash** going to mid stage

FOH (Front of House)

- GREEN ARE ESSENTIAL LIGHTS
- ORANGE ARE IDEAL LIGHTS
- IF NOT ENOUGH FIXTURES TO COVER PLOT, PRIORITIZE CENTER RING AND WASH

ARTRAGEOUS®

## LIGHTING

● Artrageous does not use followspots, nor do we add any lighting to your rigging or fly rails.
● Artrageous relies on the venue lighting system and LD in conjunction with their stage-based lights. ● Artrageous will set up their specialty lighting, walk through the show with your LD during setup, and run their board during the show.

● We provide a focus sheet and lighting show flow in advance and on site.
● Our Show Caller will also communicate with your LD using 1 Com (stage right) during the show.

● We ask for FOH lights (only) to be focused
● We ask for overhead electrics during our standard Artrageous production, but they do not require focusing.
● We ask for white light (only) to be provided (no colors)

● We ask for lights to be focused and ready to trim PRIOR to load in (IF possible)

● Artrageous travels with ground-supported specialty lights: Wildfire LED Blacklight System, Astera Pixel Tubes, Eliminator Stryker LED Movers, which are all run by our ChamSys MagicQ MQ-80 board from stage

## AUDIO

● Artrageous sets up and runs all of their own audio gear for the stage (monitors and in-ear monitors)
● Artrageous relies on the FOH sound system and Audio Engineer to run the House sound (only). ● Artrageous has an audio technician who runs all monitors during soundcheck and the show.

● We provide an audio show flow & input list for your Audio Engineer
● We use 19 Channels in our standard show

● We travel with a rolling rack with a monitor board, wireless mics, IEMs and a 32 channel splitter
● Splitter has 15’ fan-out with all 32 channels, which we plug into the FOH patch bay or snake box
● We request our Audio Rack to be stage left (whenever possible).

● We run 3 monitor wedges downstage, a snake upstage for backline, & provide all backline gear and cabling.

ARTRAGEOUS®

**LOAD IN**

**0-30 min: Load in & deck floor covering set (which has lighting focus rings on it)**

**We set up our own equipment on stage**

**45 min: Upstage fly bar lowered to hang backdrop**

**75 min: Audio line check**

**90 min: Soundcheck**

**Stage tech works with venue LD to finalize lighting and review show flow**

**120 min: Rehearsal with full audio and lighting**

**160 min: Complete**

**PRE-SHOW**

**45 min before show: Line check**

**30 min before show: Doors open. Troupe greets audience in house with our pre-show music playing SHOW**

**45 min: Act 1**

**15 min: Intermission**

**45 min: Act 21**

**15 min: Live Gallery**

**POST-SHOW**

**70 min: Strike and Load Out**

**LOGISTICS: Artrageous travels with a 45' Bus for passengers and a 35' Bus for gear. (Shore power not required)**

ARTRAGEOUS®
